3. SMSC

smsc.ru "" WNAM:

The screenshot shows the configuration interface for the SMSC service. Under the 'Настройки API' (API Settings) section, the URL for responses and statuses is set to 46.177:8080/cp/smsc_recv. The 'Пересыпать на URL' (Forward to URL) option is selected for 'статусы' (statuses) and 'входящие sms' (incoming messages). A test message is being sent to verify the status and message handling. Several checkboxes are available for configuring SMPP access, message delivery, tracking, testing, control, and logging.
